

# SCADA and Industrial Automation

Make Sense And Save Money With Industrial Control Solutions

Kimark Systems' years of experience in working with Municipalities and Industrial Companies has taught us the value of being able to provide solutions that make sense not only for our customers' operations requirements, but also for their budgets.

## Capabilities

- Automation Retrofits
- Custom Built Panels
- Custom Software Design
- Industrial Automation
- Microsoft SQL Server Integration & Reporting
- Municipalities Automation
- SCADA / Networking
- Water / Wastewater Controls

# Supervisory Control

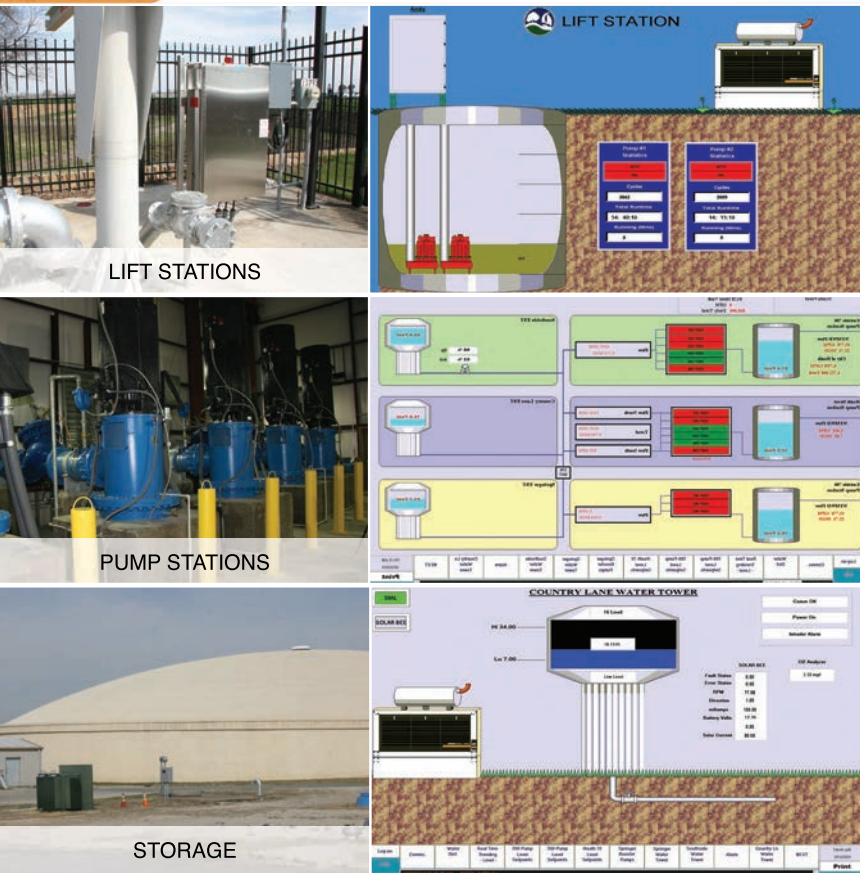

Our assembled staff of experienced engineers, technicians and a UL508 Panel Shop provide our customers with a complete **CONTROLS SOLUTION.**

## Flexibility and Versatility

Kimark Systems can modify, make additions to or implement the necessary Control Panels, Hardware, Software, and HMI/Operator equipment to do any job – large or small, intricate or straightforward.

## Experience

Our engineering staff's broad experience with the leading Operator Interface software packages such as Wonderware, Intellution, Win911, and KEP Ware / Infilink ensures our customers of receiving an elegant and easy-to-use system for operators along with a wide variety of reports.

## Longterm Viability

Kimark Systems partners with industry leaders on an ongoing basis. These long-established relationships are important for customer confidence in our solutions and the continued viability of their systems.

# Data Acquisition

In addition to our high level of controls experience, Kimark Systems knows that “Information is the Key” to robust Automation Systems.

## Communications Networks

Whether hard-wired or via radio telemetry, Kimark Systems’ years of experience working with industry standard communications networks affords our customers the certainty that their existing system can be expanded or blended into a

communications network providing timely updating and reliable data. Modbus, Ethernet, CAN, and Data Highway are the better known and widely utilized network communication platforms that Kimark uses on an ongoing basis.

## Data: Radio Telemetry

Hard-wired communications networks occasionally do not make fiscal or logistical sense.

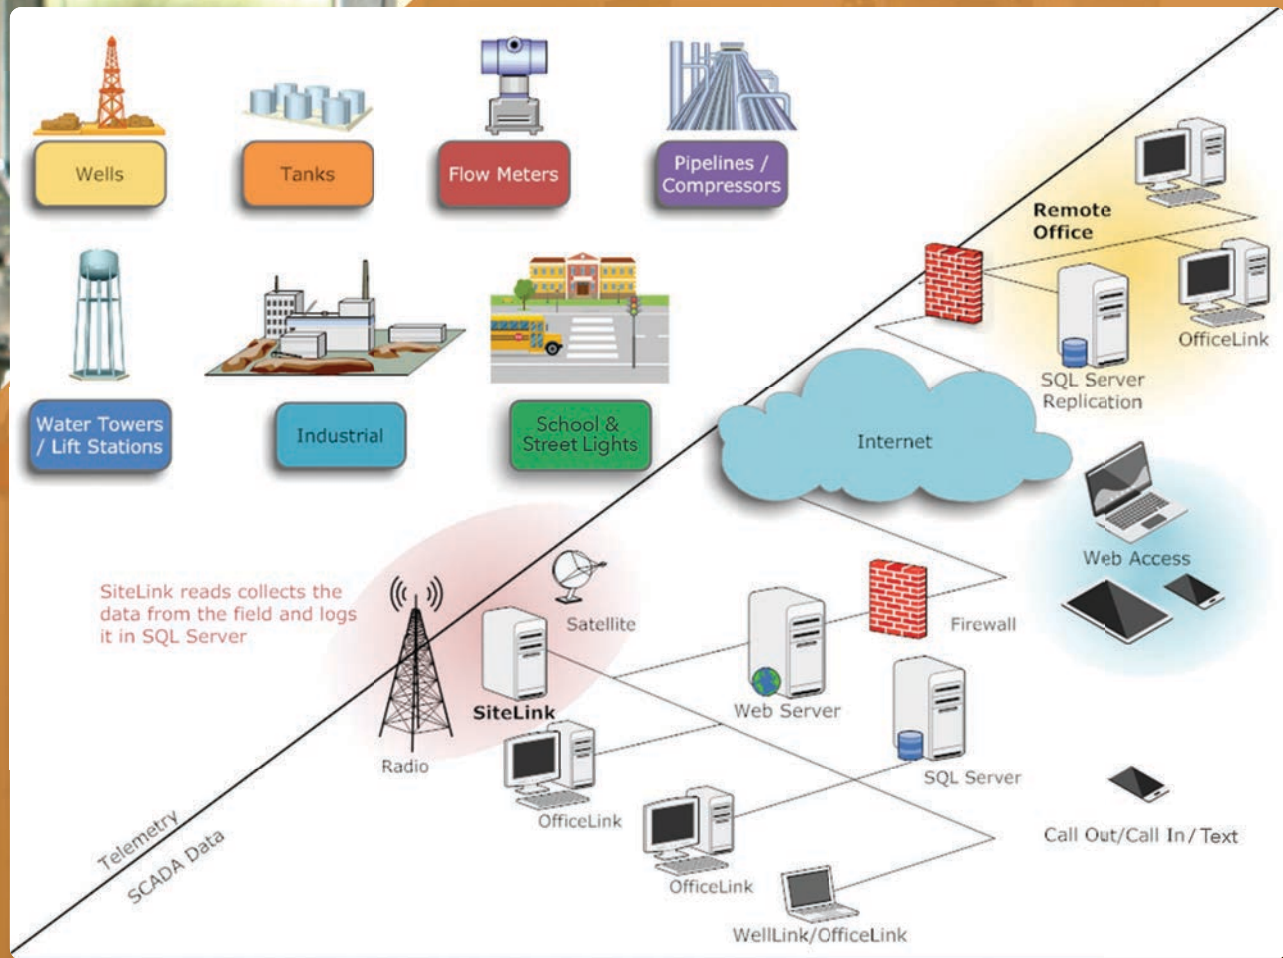

In these situations, Kimark Systems has implemented and commissioned multiple radio telemetry communications

systems utilizing licensed frequency or frequency-hopping spread spectrum radios or a combination of both.

## Data Confidence

Our many years’ experience in implementing and maintaining communications systems for control and data acquisition allows our customers to have confidence in their system and the information gathered.
